

ABSTRACT OF THE DISCLOSURE**VERIFYING MESSAGING SESSIONS BY DIGITAL SIGNATURES OF
PARTICIPANTS**

5

A method, system and program for saving logfiles of a messaging session with the digital signatures of participants in the messaging session is provided. A selection of message entries from a messaging session are recorded, wherein multiple users are participating in the messaging session. Digital signatures associated with the users are attached to the recording of the selection of message entries from the messaging session, such that an identity associated with each digital signature is verifiable for the recording of the messaging session.
